

**METHOD, APPARATUS AND PROGRAM STORAGE DEVICE
FOR INLINE CONTROLLING OF ROW AND COLUMN SETS IN TABULAR
DISPLAYS**

5

ABSTRACT

A method, apparatus and program storage device for inline controlling of row and column sets in tabular displays is disclosed. A macro controller provides a single control and is inline with the display and the user tasks. The macro controller allows the user to quickly switch between view configurations and thus provides an inline, e.g., it is not via
10 a way off-to-the-side configuration panel, and very easy way to set the set of columns and set of rows that get displayed in a table with just one or two user actions.
